

# Book Wishlist App: Portfolio Part 1

## Description

A simple web app for users to track books they want to read. Readers can create a profile, manage books across devices, and organize them into categories. The app provides an intuitive way to track reading progress (Want to Read, Reading, Read).

## Target group

Designed for book lovers, students, and casual readers who need an easy way to organize reading lists.

## Features

- Sign-up/login.
- Add books with title, author, category, and status.
- Easily find books by title, author, or category.

## Tech Implementation

- Front-end: Next.js- Fast and supports SSR for performance and SEO.
- Back-end: Next.js Server Actions- Easy to integrate back-end
- Database: SQLite- Stores user profiles, book data, and reading progress.
